Introduction

Product Description

The MB961 Series Micro ATX motherboard is based on the latest Intel® H61/Q67 Express chipset. The platform supports 2nd generation Intel® Core™ processor family with LGA1155 packing and features an integrated dual-channel DDR3 memory controller as well as a graphics core.

The latest Intel processors provide advanced performance in both computing and graphics quality. The MB961 Series board utilizes the dramatic increase in performance provided by this Intel's latest cutting-edge technology. This meets the requirement of customers in the gaming, POS, digital signage and server market segment.

Measuring 244mm x 244mm, the MB961 Series offers 3Gbps/6Gbps SATA support, USB3.0 (2 ports) and interfaces for DVI-I, HDMI and LVDS displays.

MB961 Series FEATURES:

- Supports Intel 2nd Generation Core i7/i5/i3 QC/DC desktop processors
- Two DDR3 DIMM, 1066/1333MHz; supports up to 16GB memory
- One Intel PCI-Express Gigabit LAN and one Realtek PCI-Express Gigabit LAN
- Integrated Graphics for DVI-I and HDMI (MB961F/MB961RF only) displays
- Support LVDS 24 bit dual channel for MB961F/MB961RF only
- 4x SATA 2.0 for MB961/MB961F, 2x SATA 2.0 and 2x SATA 3.0 for MB961RF, 10x USB 2.0, 2x USB 3.0 for MB961/MB961F, 12x USB, 2.0, 2x USB 3.0 for MB961RF
- 4x COM, Watchdog timer
- Supports LPT port for MB961 only
- 1x PCI-E (x16), 1x PCI-E (x8) Slot (MB961/MB961F only supports PCIE x1 lane, MB961RF supports PCIE x1 lane or PCIE x4 lanes)

Checklist

Your MB961 Series package should include the items listed below.

- The MB961 Series motherboard
- This User's Manual
- 1 CD containing chipset drivers and flash memory utility
- Serial ATA cable

MB961 Series Specifications

Product Name	MB961RF (Q67 based) MB961F (H61 based) MB961 (H61 based)
Form Factor	Micro ATX
CPU Type	Intel® 2 nd generation Core™ i7/i5/i3/Pentium®/Celeron® DT processor TDP for QC= 95W/65W/45W;DC= 65W/35W [Package = FC-LGA10, 37.5 mm x 37.5mm]
CPU Speed	Up to 3.40 GHz
Cache Size	Up to 8MB shared L2 Cache
CPU Socket	LGA1155 (Socket H2)
Chipset	Intel® BD82H61 PCH for MB961/MB961F (TDP=6.1W) or BD82Q67 PCH for MB961RF [27mm x 27mm, 942-pin FCBGA package]
BIOS	AMI BIOS, support ACPI Function
Memory	Intel® 2 nd generation Core™ i7/i5/i3/Pentium®/Celeron® DT processor integrated memory controller support DDR3-1600 (Non-ECC) UDIMM x 2, Max. 16GB
VGA	Intel® 2 nd generation Core™ i7/i5/i3/Pentium® DT processor integrated Gfx(HD2000/HD3000) ● DVI-I x 1 (thru Level shifter ASM1442) ● HDMI x 1 for MB961F/MB961RF only ● LVDS (thru CH7511 via DP) for MB961F/MB961RF only
LAN	Intel 82579V PCIe Gigabit LAN PHY x 1 Realtek RTL8111E PCIe Gigabit LAN controller x1
USB	USB 2.0 host controller, supports 10/12 ports - 4 ports in the rear panel. - 6 ports for onboard pin header (MB961/MB961F) or 8 ports for onboard pin header (MB961RF) USB 3.0 host controller (ASM1042), support 2 ports - 2 ports in the rear panel
Serial ATA	Intel® H61/Q67 PCH build-in SATA controller, Supports 4 ports x SATA 2.0 from H61 PCH (MB961/MB961F) Supports 2 ports x SATA 3.0 + 2 ports x SATA 2.0 from Q67 PCH (MB961RF)
Audio	Intel® H61/Q67 PCH built-in High Definition Audio controller: ALC892 w/ 7.1 channels
LPC I/O	Fintek F81866AD-I COM1 (RS232/422/485) [Auto flow control/ Jumper less selection]; COM2~4 (RS232 only) COM1/2 with pin-9 with power for 2 ports (500 mA each) Hardware Monitor (2 thermal inputs, 4 voltage monitor inputs & 2 Fan headers) CPU Fan = 4-pin type (PWM); SYS Fan= 3-pin type (DC) LPT port (MB961 only)
Digital IO	4 in & 4 out

Installations

This section provides information on how to use the jumpers and connectors on the MB961 Series in order to set up a workable system. The topics covered are:

Installing the CPU..... 7

Installing the Memory 8

Setting the Jumpers 9

Connectors on MB961Series 15

Installing the CPU

The MB961 Series board supports an LGA1155 Socket (shown below) for Intel Sandy Bridge processors.

To install the CPU, unlock first the socket by pressing the lever sideways, then lift it up to a 90-degree. Then, position the CPU above the socket such that the CPU corner aligns with the gold triangle matching the socket corner with a small triangle. Carefully insert the CPU into the socket and push down the lever to secure the CPU. Then, install the heat sink and fan.

NOTE: *Ensure that the CPU heat sink and the CPU top surface are in total contact to avoid CPU overheating problem that would cause your system to hang or be unstable.*

Installing the Memory

The MB961 Series board supports four DDR3 memory socket for a maximum total memory of 16GB in DDR3 DIMM memory type.

Installing and Removing Memory Modules

To install the DDR3 modules, locate the memory slot on the board and perform the following steps:

1. Hold the DDR3 module so that the key of the DDR3 module aligned with that on the memory slot.
2. Gently push the DDR3 module in an upright position until the clips of the slot close to hold the DDR3 module in place when the DDR3 module touches the bottom of the slot.
3. To remove the DDR3 module, press the clips with both hands.

Setting the Jumpers

Jumpers are used on MB961 Series to select various settings and features according to your needs and applications. Contact your supplier if you have doubts about the best configuration for your needs. The following lists the connectors on MB961 Series and their respective functions.

BIOS Introduction

The BIOS (Basic Input/Output System) installed in your computer system's ROM supports Intel processors. The BIOS provides critical low-level support for a standard device such as disk drives, serial ports and parallel ports. It also provides password protection as well as special support for detailed fine-tuning of the chipset controlling the entire system.

BIOS Setup

The BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS ROM of the system stores the Setup utility. When you turn on the computer, the BIOS is immediately activated. Pressing the key immediately allows you to enter the Setup utility. If you are a little bit late pressing the key, POST (Power On Self Test) will continue with its test routines, thus preventing you from invoking the Setup. If you still wish to enter Setup, restart the system by pressing the "Reset" button or simultaneously pressing the <Ctrl>, <Alt> and <Delete> keys. You can also restart by turning the system Off and back On again. The following message will appear on the screen:

Press to Enter Setup

In general, you press the arrow keys to highlight items, <Enter> to select, the <PgUp> and <PgDn> keys to change entries, <F1> for help and <Esc> to quit.

When you enter the Setup utility, the Main Menu screen will appear on the screen. The Main Menu allows you to select from various setup functions and exit choices.

Warning: *It is strongly recommended that you avoid making any changes to the chipset defaults. These defaults have been carefully chosen by both AMI and your system manufacturer to provide the absolute maximum performance and reliability. Changing the defaults could cause the system to become unstable and crash in some cases.*

If ENABLED allows device to use 8-bit Tag field as a requester.

No Snoop

Enables or disables PCI Express Device No Snoop option.

Maximum Payload

Set Maximum Payload of PCI Express Device or allow System BIOS to select the value.

Maximum Read Request

Set Maximum Read Request Size of PCI Express Device or allow System BIOS to select the value.

ASPM Support

Set the ASPM Level: Force L0s – Force all links to L0s State:

AUTO – BIOS auto configure: DISABLE – Disables ASPM.

Extended Synch

If ENABLED allows generation of Extended Synchronization patterns.

Link Training Retry

Defines number of Retry Attempts software will take to retrain the link if previous training attempt was unsuccessful.

Link Training Timeout (uS)

Defines number of Microseconds software will wait before polling 'Link Training' bit in Link Status register. Value range from 10 to 1000 uS.

Unpopulated Links

In order to save power, software will disable unpopulated PCI Express links, if this option set to 'Disable Link'.

Limit CPUID Maximum

Disabled for Windows XP.

Execute Disable Bit

XD can prevent certain classes of malicious buffer overflow attacks when combined with a supporting OS (Windows Server 2003 SP1, Windows XP SP2, SuSE Linux 9.2, Red Hat Enterprise 3 Update 3.)

Intel Virtualization Technology

When enabled, a VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.

Hardware Prefetcher

XHCI Hand-off

This is a workaround for OSeS without XHCI hand-off support. The XHCI ownership change should be claimed by XHCI driver.

EHCI Hand-off

Enabled/Disabled. This is a workaround for OSes without EHCI hand-off support. The EHCI ownership change should be claimed by EHCI driver.

Port 64/60 Emulation

Enables I/O port 60h/64h emulation support. This should be enabled for the complete USB keyboard legacy support for non-USB aware OSes.

USB Transfer time-out

The time-out value for Control, Bulk, and Interrupt transfers.

Device reset time-out

USB mass Storage device start Unit command time-out.

Device power-up delay

Maximum time the device will take before it properly reports itself to the Host Controller. 'Auto' uses default value: for a Root port it is 100ms, for a Hub port the delay is taken from Hub descriptor.

Drivers Installation

This section describes the installation procedures for software and drivers. The software and drivers are included with the motherboard. If you find the items missing, please contact the vendor where you made the purchase. The contents of this section include the following:

Intel Chipset Software Installation Utility	54
VGA Drivers Installation	56
Realtek HD Audio Driver Installation	58
LAN Drivers Installation	59
Realtek LAN Controller Drivers Installation	61
Intel® Management Engine Interface	64
ASMedia USB 3.0 Drivers	67

IMPORTANT NOTE:

After installing your Windows operating system, you must install first the Intel Chipset Software Installation Utility before proceeding with the drivers installation.

Intel Chipset Software Installation Utility

The Intel Chipset Drivers should be installed first before the software drivers to enable Plug & Play INF support for Intel chipset components. Follow the instructions below to complete the installation.

1. Insert the CD that comes with the board. Click **Intel** and then **Intel(R) 7 Series Chipset Drivers**.

2. Click **Intel(R) Chipset Software Installation Utility**.

3. When the Welcome screen to the Intel® Chipset Device Software appears, click **Next** to continue.

4. Click **Yes** to accept the software license agreement and proceed with the installation process.

5. On the Readme File Information screen, click **Next** to continue the installation.

6. The Setup process is now complete. Click **Finish** to restart the computer and for changes to take effect.

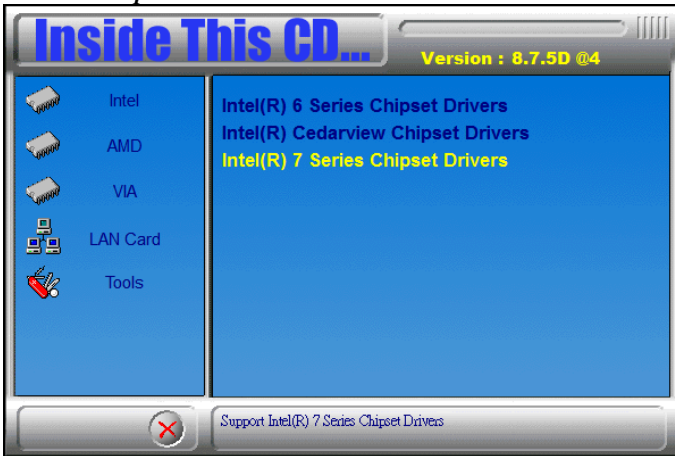

VGA Drivers Installation

NOTE: Before installing the *Intel(R) Q77 Chipset Family Graphics Driver*, the Microsoft .NET Framework 3.5 SPI should be first installed.

To install the VGA drivers, follow the steps below.

1. Insert the CD that comes with the board. Click *Intel* and then *Intel(R) 7 Series Chipset Drivers*.

2. Click *Intel(R) Q77 Chipset Family Graphics Driver*.

3. When the Welcome screen appears, click **Next** to continue.

4. Click **Yes** to agree with the license agreement and continue the installation.

5. On the Readme File Information screen, click **Next** to continue the installation of the Intel® Graphics Media Accelerator Driver.

6. On Setup Progress screen, click **Next** to continue.

7. Setup complete. Click **Finish** to restart the computer and for changes to take effect.

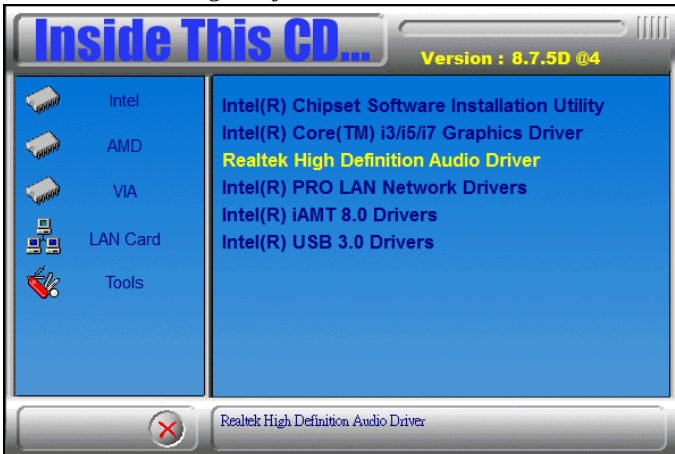

Realtek HD Audio Driver Installation

Follow the steps below to install the Realtek HD Audio Drivers.

1. Insert the CD that comes with the board. Click **Intel** and then **Intel(R) 7 Series Chipset Drivers**.

2. Click **Realtek High Definition Audio Driver**.

3. On the Welcome to the InstallShield Wizard screen, click **Next** to proceed with and complete the installation process.
4. The InstallShield Wizard Complete. Click **Finish** to restart the computer and for changes to take effect.

LAN Drivers Installation

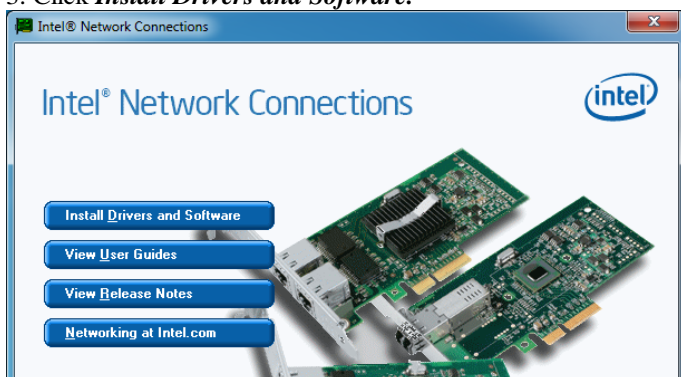

1. Insert the CD that comes with the board. Click **Intel** and then **Intel(R) 7 Series Chipset Drivers**.

2. Click **Intel(R) PRO LAN Network Driver**.

3. Click **Install Drivers and Software**.

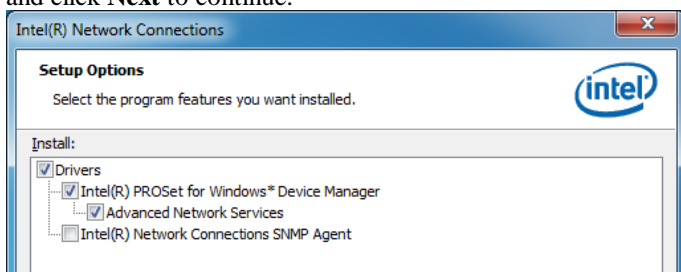

4. When the Welcome screen appears, click **Next**.

5. Click **Next** to agree with the license agreement.

6. Click the checkbox for **Drivers** in the Setup Options screen to select it and click **Next** to continue.

Realtek LAN Controller Drivers Installation

Follow the steps below to install the Realtek LAN Drivers.

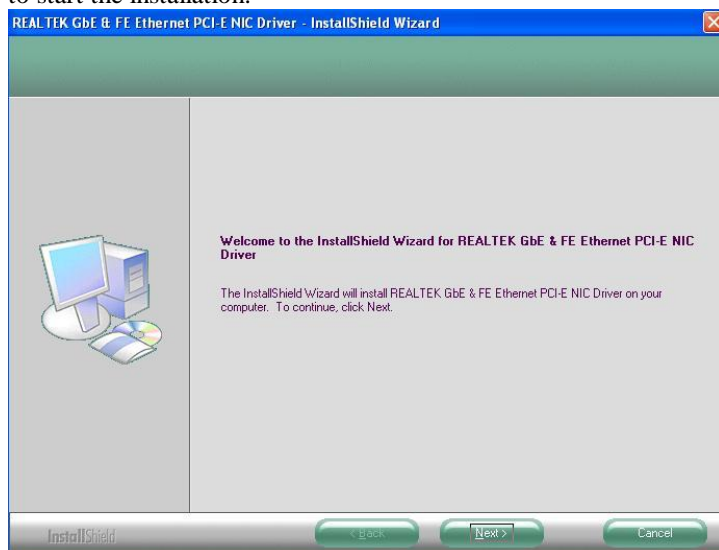

1. Insert the CD that comes with the board. Click **Intel**, then **LAN Card**, and then **Realtek Lan Controller Drivers**.

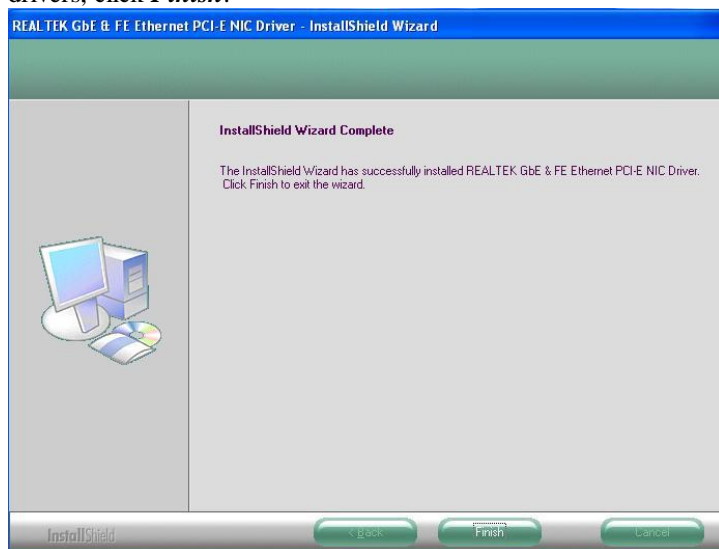

2. Click **Realtek RTL8111E LAN Drivers**.

3. When the welcome screen to InstallShield Wizard appears, click **Next** to start the installation.

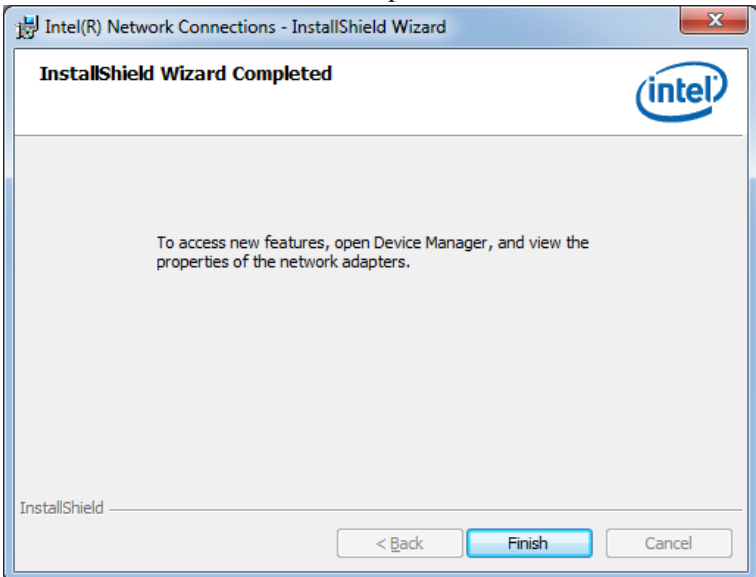

4. When the InstallShield Wizard has finished installing the Realtek LAN drivers, click **Finish**.

7. The wizard is ready to begin installation. Click **Install** to begin the installation.

8. When InstallShield Wizard is complete, click **Finish**.

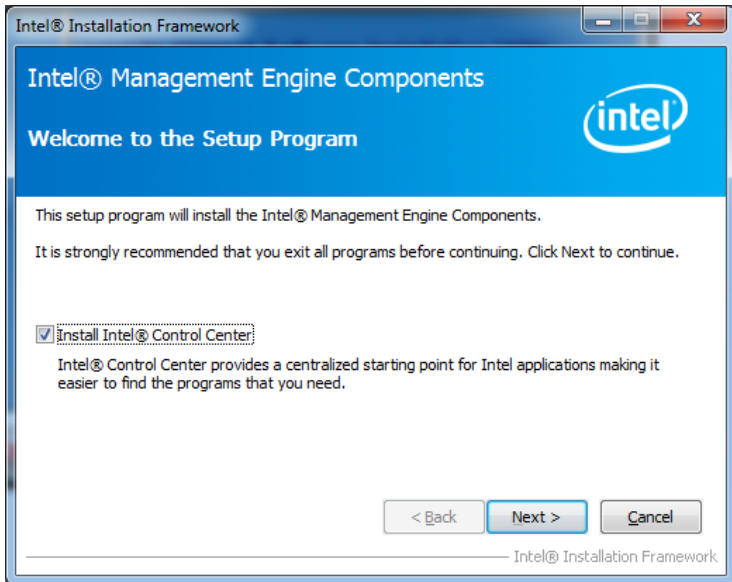

Intel® Management Engine Interface

Follow the steps below to install the Intel Management Engine.

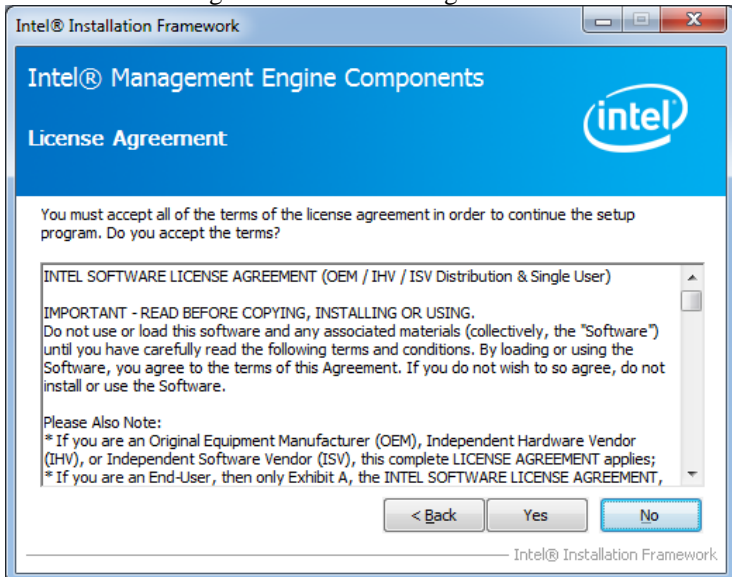

1. Insert the CD that comes with the board. Click **Intel** and then **Intel(R) AMT 8.0 Drivers**.

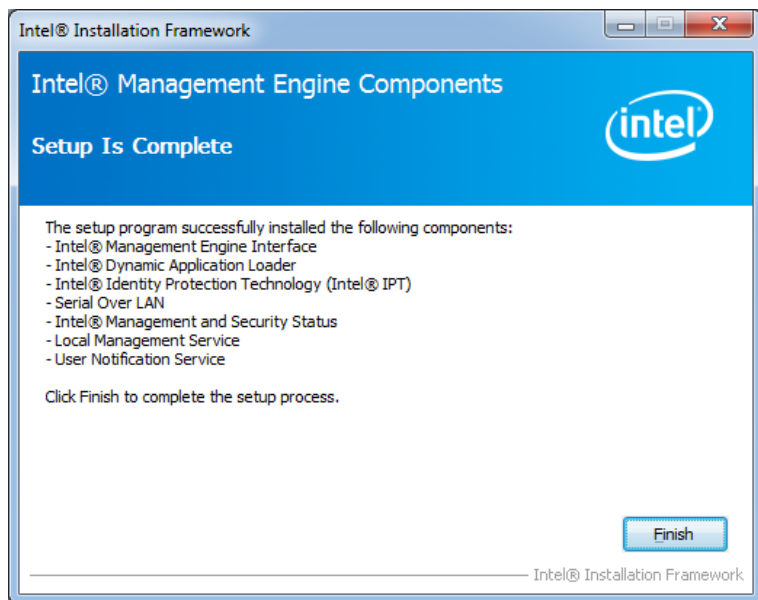

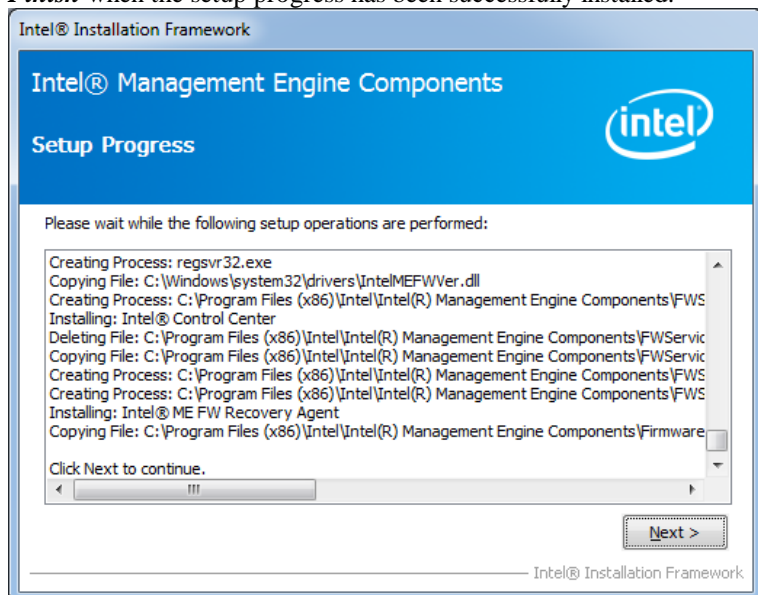

2. When the Welcome screen to the InstallShield Wizard for Intel® Management Engine Components, click the checkbox for **Install Intel® Control Center** & click **Next**.

3. Click **Yes** to agree with the license agreement.

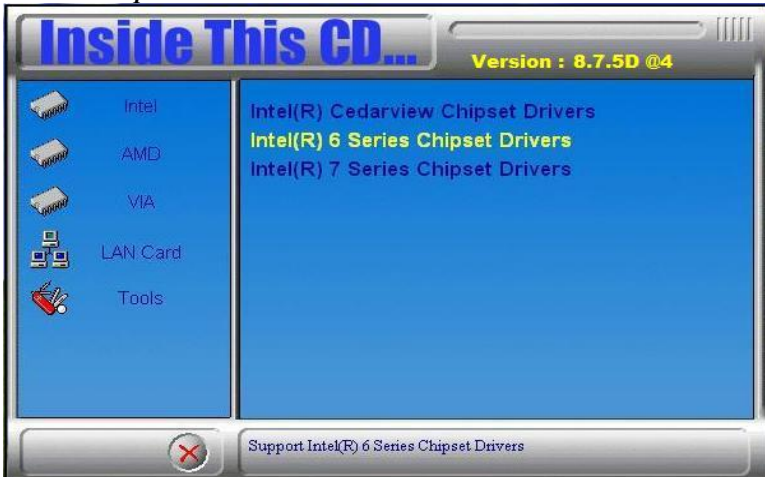

4. When the Setup Progress screen appears, click **Next**. Then, click **Finish** when the setup progress has been successfully installed.

ASMedia USB 3.0 Drivers

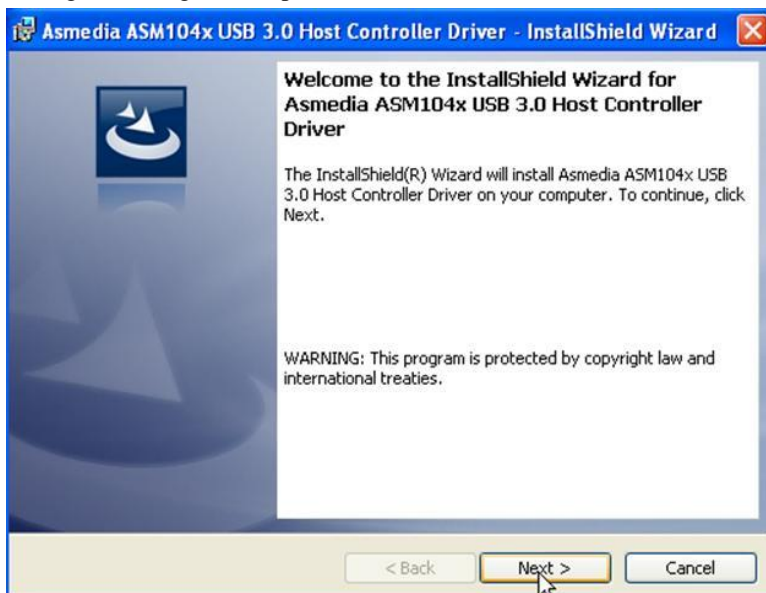

1. Insert the CD that comes with the board. Click *Intel* and then *Intel(R) 6 Series Chipset Drivers*.

2. Click *Intel(R) PRO LAN Network Driver*.

2. When the Welcome screen to the InstallShield Wizard for Intel® Management Engine Components, click *Next*.

3. When InstallShield Wizard is complete, click *Finish*.

Appendix

A. I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses which also becomes the identity of the device. The following table lists the I/O port addresses used.

Address	Device Description
000h - 01Fh	DMA Controller #1
020h - 03Fh	Interrupt Controller #1
040h - 05Fh	Timer
060h - 06Fh	Keyboard Controller
070h - 07Fh	Real Time Clock, NMI
080h - 09Fh	DMA Page Register
0A0h - 0BFh	Interrupt Controller #2
0C0h - 0DFh	DMA Controller #2
0F0h	Clear Math Coprocessor Busy Signal
0F1h	Reset Math Coprocessor
1F0h - 1F7h	IDE Interface
2E8h - 2EFh	Serial Port #4(COM4)
2F8h - 2FFh	Serial Port #2(COM2)
2B0h - 2DFh	Graphics adapter Controller
378h - 3FFh	Parallel Port #1(LPT1)
3E8h - 3EFh	Serial Port #3(COM3)
3F8h - 3FFh	Serial Port #1(COM1)

B. Interrupt Request Lines (IRQ)

Peripheral devices use interrupt request lines to notify CPU for the service required. The following table shows the IRQ used by the devices on board.

Level	Function
IRQ0	System Timer Output
IRQ1	Keyboard
IRQ3	Serial Port #2
IRQ4	Serial Port #1
IRQ5	Serial Port #3 & Serial Port #4 & Parallel Port #1
IRQ6	Reserved
IRQ7	Reserved
IRQ8	Real Time Clock
IRQ9	Microsoft ACPI-Compliant System
IRQ10	Intel(R)6 Series /C200 Series Chipset Family SMBus Controller-1C22
IRQ12	PS/2 Mouse

C. Watchdog Timer Configuration

The WDT is used to generate a variety of output signals after a user programmable count. The WDT is suitable for use in the prevention of system lock-up, such as when software becomes trapped in a deadlock. Under these sorts of circumstances, the timer will count to zero and the selected outputs will be driven. Under normal circumstance, the user will restart the WDT at regular intervals before the timer counts to zero.
